RSQ8 4.0 V8 BI TURBO OPF + NON OPF VEHICLES	2020 ONWARD

NOTES	Installation of MSVS063 Valve Controller on RSQ8 Models, Milltek or OE Exhausts

1. Installation begins in the boot area, remove the boot floor, then remove the LH side trim panel as shown, and then the rear scratch plate.

2. Next, find the Control pannel in the LH arch and remove as shown below, then also remove the small clip shown in the images, this will then allow the side wall to be removed to reveal the grommet required.

You will need to find the grommet in the images below so that you can pass the valve controller cables to the outside of the Vehicle.

Once this is done, you can plug the male and female plugs inbetween the standard wiring and the actuator, this will power the product. it should then be ready to test.

Reassemble the vehicle in reverse order.
